

Efficient Fermentation Made Easy

ForageMate® AP is a microbial inoculant blend of three proprietary lactic acid bacterial strains to promote rapid and efficient fermentation when used on a variety of forage types.

Crop Types

Alfalfa, Grass, Corn, Small Grain & Sorghum Silage

Features & Benefits

Promotes lactic acid production to ensure fast and efficient fermentation.

Proprietary blend of three different strains of lactic acid bacteria to provide 100,000 CFU/g of forage crop.

Enhanced preservation through rapid reduction in pH improving dry matter retention and nutrient preservation.

Versatile application, available in easy-to-mix water-soluble and dry granular forms.

Efficacy Proven by Research & Field Trials

- ForageMate® AP consistently increases lactic acid production compared to the control across different forage types.
- Lactic acid production drives down pH, indicating rapid fermentation.
- Quick fermentation reduces the risk associated with prolonged fermentation.

Improves Dry Matter Recovery

- Improving dry matter retention protects your forage investment by reducing shrink and improving feed quality.
- Helps extend your forage inventory and reduces the need to purchase additional feedstuffs, saving money and resources.

Packaging & Forms

Forage Type	Alfalfa, Grass, Small Grain, Corn & Sorghum Silage
CFU/g of Treated Forage	100,000
Water-Soluble Canister – 100 g	
Application Rate	1g/ton
Tons As-Fed Treated	100 tons
Water-Soluble Canister – 1,000 g	
Application Rate	1g/ton
Tons As-Fed Treated	1,000 tons
Dry Granular Bag – 50 lbs	
Application Rate	1lb/ton
Tons As-Fed Treated	50 tons

Application

Ease of application through cool, clean, non-chlorinated water.

Storage

Appropriate storage and handling are necessary for product integrity.

- Water soluble products are recommended to be kept in refrigeration or freezer. Once mixed and in solution, product is best used in one day. For overnight storage of mixed product, use ice packs in applicator.
- Dry granular is best kept out of direct sunlight and in unopened bags.

Advanced Carrier System for Integrity of Product

- Supplemental energy for bacteria after hydration with water.
- Stabilizing buffer to moderate pH.
- Moisture scavenger for bacteria stability during storage.
- Oxygen scavenger for bacteria integrity and longevity.
- Chlorine binder for bacteria survivability.
